RTMS risk assessment

	INTEGRATED MANAGEMENT SYSTEM (ISO 39001:2012 & ISO 14001:2015)	Doc No.	IMS – SHE 01
	<u>RTMS risk assessment</u>	Compiled By :	Leroy Dwyer
		Approved By :	Abdul Kamdor
		Issue Date :	

1. Loading Risks

1.1. Vehicle Damage

- Risk: Vehicles may suffer cosmetic or structural damage during loading due to misalignment, inadequate equipment, or human error.
- Mitigation:
 - Use advanced alignment tools and laser guides to ensure precision during loading.
 - Implement a double-check system where a second operator verifies the vehicle's position before final securing.
 - Use protective padding on potential contact points to minimize damage.

1.2. Worker Injury

- Risk: Injuries from improper lifting techniques, equipment malfunctions, or slips and falls.
- Mitigation:
 - Introduce ergonomic training to minimize strain-related injuries.
 - Use mechanical aids such as vehicle lifts to reduce manual handling.
 - Ensure that work areas are kept dry and clear of obstacles to prevent slips and trips.

1.3. Equipment Failure

- Risk: Failure of loading ramps, hydraulic systems, or tie-downs could result in accidents.
- Mitigation:
 - Implement a rigorous pre-use inspection routine for all loading equipment.
 - Maintain a stock of spare parts to quickly address any failures.
 - Conduct drills for staff to practice responding to equipment failures safely.

1.4. Environmental Factors

- Risk: Loading during adverse weather conditions (e.g., rain, snow, extreme heat) could increase the risk of accidents or delays.
- Mitigation:
 - Schedule loading activities during favorable weather conditions when possible.
 - Use covered or indoor loading bays to protect operations from weather exposure.
 - Equip staff with weather-appropriate PPE, such as waterproof gear or insulated clothing.

2. Offloading Risks

2.1. Vehicle Damage

	INTEGRATED MANAGEMENT SYSTEM (ISO 39001:2012 & ISO 14001:2015)	Doc No.	IMS – SHE 01
	<u>RTMS risk assessment</u>	Compiled By :	Leroy Dwyer
		Approved By :	Abdul Kamdor
		Issue Date :	

- Risk: Vehicles might be scratched, dented, or otherwise damaged during offloading due to hasty operations or inadequate space.
- Mitigation:
 - Allocate sufficient time for offloading to avoid rushed operations.
 - Designate a dedicated offloading area with ample space and clear markings.
 - Use protective barriers or cones to safeguard vehicles from nearby hazards.

2.2. Worker Injury

- Risk: Workers may be injured by falling from heights, tripping on uneven ground, or being struck by moving vehicles.
- Mitigation:
 - Install guardrails or safety barriers on carrier platforms to prevent falls.
 - Ensure that the offloading area is level and free from debris or potholes.
 - Implement a clear signal system to manage the movement of vehicles and personnel.

2.3. Environmental Hazards

- Risk: Spills or leaks of hazardous substances during offloading can pose environmental and health risks.
- Mitigation:
 - Implement a spill prevention plan that includes secondary containment measures.
 - Train staff on immediate response protocols for hazardous spills.
 - Regularly inspect vehicles for potential leaks before offloading.

2.4. Security Risks

- Risk: Theft or vandalism during offloading, particularly in unsecured or high-crime areas.
- Mitigation:
 - Utilize security personnel or surveillance systems at offloading sites.
 - Plan offloading times during daylight hours or in well-lit areas.
 - Secure the vehicles with anti-theft devices until they are offloaded.

3. On-Route Risks

3.1. Traffic Accidents

- Risk: The risk of accidents increases due to long driving hours, driver fatigue, or road hazards.
- Mitigation:

	INTEGRATED MANAGEMENT SYSTEM (ISO 39001:2012 & ISO 14001:2015)	Doc No.	IMS – SHE 01
	<u>RTMS risk assessment</u>	Compiled By :	Leroy Dwyer
		Approved By :	Abdul Kamdor
		Issue Date :	

- Implement strict adherence to Hours of Service (HOS) regulations to prevent driver fatigue.
- Equip carriers with fatigue monitoring systems that alert drivers when they show signs of drowsiness.
- Conduct route assessments to identify and avoid hazardous roads or traffic conditions.

3.2. Vehicle Theft

- Risk: Vehicles could be targeted for theft while in transit, especially in high-risk areas.
- Mitigation:
 - Equip all vehicles with tamper-resistant GPS tracking devices.
 - Plan routes to avoid known high-risk areas, and use secure parking locations for rest stops.
 - Implement procedures for rapid response if a theft is detected, including immediate reporting to authorities.

3.3. Environmental Conditions

- Risk: Severe weather conditions such as hurricanes, floods, or snowstorms can impede travel, cause delays, or lead to accidents.
- Mitigation:
 - Equip carriers with weather monitoring systems that provide real-time updates to drivers.
 - Develop contingency plans for rerouting or halting operations during extreme weather events.
 - Train drivers on how to handle emergency situations related to adverse weather conditions.

3.4. Load Shifting

- Risk: Vehicles may shift during transit, potentially causing instability, damage, or accidents.
- Mitigation:
 - Use advanced load stabilization technology, such as air suspension systems or load balancing algorithms.
 - Perform mid-route inspections at designated stops to ensure load stability.
 - Utilize adjustable tie-downs that can be tightened en route to compensate for any movement.

3.5. Mechanical Failures

- Risk: Mechanical failures (e.g., brake failure, tire blowouts) can lead to accidents or delays.

	INTEGRATED MANAGEMENT SYSTEM (ISO 39001:2012 & ISO 14001:2015)	Doc No.	IMS – SHE 01
	<u>RTMS risk assessment</u>	Compiled By :	Leroy Dwyer
		Approved By :	Abdul Kamdor
		Issue Date :	

- Mitigation:
 - Adhere to a stringent maintenance schedule for all carriers, with pre-trip and post-trip inspections.
 - Equip carriers with real-time diagnostic systems that monitor vehicle health.
 - Train drivers in basic mechanical troubleshooting and provide them with emergency repair kits.

3.6. Driver Fatigue

- Risk: Fatigue is a significant risk factor that can impair a driver's ability to operate the vehicle safely, increasing the likelihood of accidents.
- Mitigation:
 - Enforce strict adherence to Hours of Service (HOS) regulations to prevent driver overwork.
 - Implement fatigue monitoring systems that can detect signs of drowsiness and alert drivers.
 - Encourage drivers to take regular breaks, and provide comfortable rest areas at strategic points along the route.
 - Promote a culture of safety where drivers feel empowered to report fatigue without fear of retribution.

3.7. Driver Wellness and Health

- Risk: Poor health or wellness, including chronic conditions, stress, or inadequate sleep, can affect a driver's ability to perform their duties safely.
- Mitigation:
 - Provide regular health screenings and wellness programs to monitor and support driver health.
 - Offer resources for stress management, including access to counselling services.
 - Encourage a healthy lifestyle by providing information on nutrition, exercise, and the importance of regular sleep.
 - Implement policies that allow for flexible scheduling or adjusted duties for drivers experiencing health issues.

3.8. Driving Hours and Legal Compliance

- Risk: Exceeding legal driving hours can lead to driver fatigue, increasing the risk of accidents, and can also result in fines and legal action.
- Mitigation:
 - Use electronic logging devices (ELDs) to track driving hours and ensure compliance with legal limits.

	INTEGRATED MANAGEMENT SYSTEM (ISO 39001:2012 & ISO 14001:2015)	Doc No.	IMS – SHE 01
	<u>RTMS risk assessment</u>	Compiled By :	Leroy Dwyer
		Approved By :	Abdul Kamdor
		Issue Date :	

- Plan routes and schedules that allow for sufficient rest periods and avoid pushing drivers to exceed their limits.
- Regularly audit driving logs to ensure compliance and identify any patterns of overwork.
- Train dispatchers and planners on the importance of scheduling that respects legal driving hours.

4. Additional Considerations

4.1. Legal Compliance

- Risk: Non-compliance with industry regulations, including load limits, emissions standards, and documentation, can result in legal action or fines.
- Mitigation:
 - Ensure continuous training for drivers and staff on current regulations and legal requirements.
 - Implement a compliance management system that tracks and logs all necessary documentation.
 - Engage with legal advisors to regularly review and update company policies to align with new regulations.

4.2. Communication Failures

- Risk: Communication breakdowns between drivers, dispatchers, or customers can lead to operational inefficiencies, delays, or errors.
- Mitigation:
 - Utilize redundant communication channels, including radios, mobile phones, and satellite communication systems.
 - Develop standardized communication protocols for reporting issues or changes in plans.
 - Implement regular check-ins between drivers and dispatchers to ensure continuous communication.

4.3. Customer Satisfaction

- Risk: Vehicle damage, delivery delays, or poor communication can negatively impact customer satisfaction and the company's reputation.
- Mitigation:
 - Establish clear customer service protocols, including regular updates on vehicle status.
 - Provide customers with online tracking tools to monitor their vehicle's progress.

	<u>RTMS risk assessment</u>	Compiled By :	Leroy Dwyer
		Approved By :	Abdul Kamdor
		Issue Date :	

- Implement a post-delivery feedback system to continuously improve service quality.

4.4. Cybersecurity

- Risk: Cyber attacks could target the company's digital systems, leading to data breaches, operational disruptions, or theft of sensitive information.
- Mitigation:
 - Implement robust cybersecurity measures, including firewalls, encryption, and multi-factor authentication.
 - Regularly update software and systems to protect against vulnerabilities.
 - Train staff on cybersecurity best practices and how to recognize phishing or other cyber threats.

4.5. Financial Risks

- Risk: Financial losses could result from operational inefficiencies, accidents, legal issues, or fluctuating fuel prices.
- Mitigation:
 - Implement cost-control measures, such as fuel optimization strategies and route planning to minimize expenses.
 - Regularly review insurance coverage to ensure adequate protection against various risks.
 - Diversify revenue streams or engage in contracts that provide financial stability.

5. Emergency Preparedness

5.1. Emergency Response Plan

- Risk: In the event of a major accident, natural disaster, or other emergencies, the company may face significant operational disruption.
- Mitigation:
 - Develop a comprehensive emergency response plan that includes evacuation procedures, communication protocols, and coordination with emergency services.
 - Conduct regular emergency drills to ensure all staff are familiar with their roles and responsibilities during a crisis.
 - Establish partnerships with local authorities and emergency services for coordinated responses.

5.2. Business Continuity

- Risk: Extended disruptions could threaten the company's ability to continue operations, leading to financial loss or bankruptcy.
- Mitigation:

	INTEGRATED MANAGEMENT SYSTEM (ISO 39001:2012 & ISO 14001:2015)	Doc No.	<i>IMS – SHE 01</i>
	<u>RTMS risk assessment</u>	Compiled By :	<i>Leroy Dwyer</i>
		Approved By :	<i>Abdul Kamdor</i>
		Issue Date :	

- Develop a business continuity plan that includes contingency measures for supply chain disruptions, IT failures, or loss of key personnel.
- Invest in insurance policies that cover business interruptions.
- Establish backup facilities or alternative transport routes to maintain operations during a crisis.
